

Hi-tech dental digital x-rays

Dentists need x-rays to provide you with the best possible care. Our office uses digital x-ray sensors that can take the same images but require up to 80% less radiation than traditional dental films. That's safer and healthier for you and all the dental staff.

Furthermore, since "digital x-rays" don't require processing chemicals, as film x-rays do, they are safer for our environment.

Instead of those tiny pieces of film, digital x-rays are instantly displayed 300x bigger on a computer screen where Dr. Fong can discuss with you your treatment options. Right there, you can have meaningful input into the final treatment decision.

Only 20% of U.S. dentists have already switched to digital x-rays. Dr. Fong's office takes pride in offering this revolutionary advance in x-ray technology for his client's long term health. One satisfied client said, "Digital x-rays give me a 21st century look at my mouth. I feel like my teeth have been transported to cyberspace."
