## Top Dentists

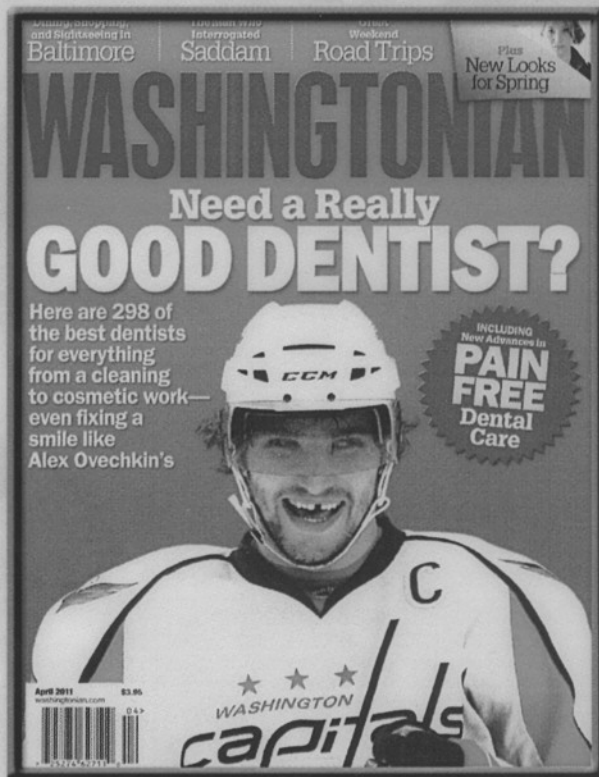

It's not easy to find a really good dentist. Here are the area's best—the general dentists, orthodontists, oral surgeons, periodontists, and other specialists who can take good care of your teeth.

We put together this year's list of top dentists the same way you might find a good dentist: mostly by word of mouth.

But we also polled a lot of people—and relied on experts.

We first mailed surveys to more than 2,000 randomly chosen dentists. Dentists see one another's work, so we asked them to name the general dentists and specialists to whom they'd send a member of their family.

The practitioners who received the most recommendations on the completed surveys are listed here.

## GENERAL DENTISTRY
