December 15, 2010

Dear Patients and Parents;

Concord Pediatric Dentistry is pleased to advise you of an exciting project – and a very easy way for your child to receive a \$15 gift card. Our office was selected for a study based at University of Southern California's School of Dentistry, funded by Northeast Delta Dental.

The goal is to evaluate a saliva test that predicts a child's risk for developing cavities. We hope the results will eventually help reduce tooth decay in children.

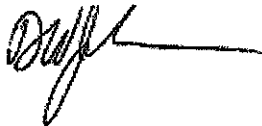

The participant simply drools a small amount of saliva into a cup. Subjects must be at least 3 years old, and covered by Northeast Delta Dental. Participation is entirely voluntary; the child and a parent must consent. Everything is anonymous and confidential.

What makes this so enticing? Each participant receives a \$15 gift certificate to Toys 'R' Us. That's right, \$15 just for spitting!

If you or your child are interested, please call our office to set up an appointment.

Thanks for your help with this important research.

Sincerely,

Dr. Doug Johnson

Dr. Patrick Capozzi

Dr. Roger Achong
