WORLD'S LARGEST PALM OIL PRODUCER ESTABLISHES RELATIONSHIP WITH SRS ENGINEERING

Indonesian leaders visit SRS Engineering and uncover goods to import/export

Murrieta, CA – April 9, 2009– SRS Engineering Corp., a Southern California-based biodiesel equipment manufacturer, was visited on March 26, 2009 by a group of Indonesian delegates to uncover potential goods to import and export from the U.S. These delegates, who represent commerce interests in their country, visited a handful of Southern California businesses to discuss potential trade agreements between the two countries.

The delegates included the chairman of the Investment Coordinating Board of the Republic of Indonesia, Muhammad Lufti; the consul general of the Indonesian Consulate General in Los Angeles, Subijaksono Sujono; the counselor for economic affairs from the Embassy of the Republic of Indonesia in Washington D.C., Ridwan Hassan; and the consul of economic affairs for the Los Angeles consulate, Edi Suharto.

Discussions were made regarding the feasibility of a biodiesel plant being erected in Indonesia, along with the possibility of the exportation of palm oil to the U.S., as Indonesia is now the largest producer of palm oil in the world.

The delegates visited a few companies throughout Southern California looking to develop partnerships with companies like SRS Engineering that could eventually evolve into international trade agreements. With SRS Engineering being a biodiesel equipment manufacturing facility and Indonesia being the largest producer of palm oil in the world, there was an obvious business relationship to be had.

“I was very impressed with the Indonesian delegates and their desire to create strong trade agreements between the two countries,” said Clayton Hawranik, President/CEO of SRS Engineering, “there seemed to be an obvious connection with what we do in the biodiesel industry and the Republic of Indonesia being the number one producer and exporter of palm oil. Our brief meeting uncovered a wealth of opportunities between our countries”

SRS Engineering will meet with local officials this month as a follow up to the Indonesian delegates visit. They are scheduled to discuss further business opportunities within the Republic of Indonesia.

About SRS Engineering Corp.

Headquartered in Murrieta, California, SRS Engineering Corporation has been manufacturing custom process equipment for various industries for more than 20 years. The company offers a wide range of biodiesel equipment, including high-FFA pretreatment systems, high-purity methanol recovery systems, continuous-flow reactors, and complete turnkey biodiesel plant solutions. SRS is uniquely positioned to deliver everything from small biodiesel plants to large-scale biodiesel refineries. For more information visit www.srsbiodiesel.com or call (800) 497-5841.
