Building Foundations with Haiti (BFH) strives to provide New York City's design community with opportunities to participate in real-life design and construction projects in response to the recent disaster in Haiti.

BFH, has collaborated with on-ground Haitian organizations to understand both current construction and relief efforts and opportunities as well as acquire an in-depth knowledge of Haiti's past, present, and future.

The design and construction resolutions generated from the upcoming projects shall focus on the future of Haiti in regards to: **housing, education, & care.**
