

Non-Healing Wounds Require Comprehensive, Compassionate Care!

Approximately five million Americans suffer from chronic open sores that can become seriously infected, gangrenous and in some cases require amputation. This is often due to limited blood flow which can slow the body's own healing process. Many patients seek professional help for wounds that have not healed.

The physicians at Wound Care Consultants are dedicated to caring for people with wounds that have resisted healing. We have established an impressive record in healing these acute and chronic ulcers. The physicians of Wound Care Consultants have created a wound program that stresses the basics of common sense medical and surgical care combined with the most state of the art wound care technologies. We know from experience that common sense, combined with the newest technologies which include; hyperbaric medicine, growth factor therapy, bioengineered tissue and advanced dressing materials work well to help heal chronic wounds and restore patients back to health.

Jeffrey Stone, D.O., M.P.H., F.C.C.W.S.

Dr. Stone has been active in wound care and hyperbaric medicine since developing the Army's hyperbaric and wound care program. He is the past president and vice president of the Texas Affiliate of the American Diabetes Association. He received his medical degree from the College of Osteopathic Medicine of the Pacific and a Master of Public Health from Harvard University. He is board certified in hyperbaric medicine and aerospace medicine. He is a Diplomat and Fellow of the American Academy of Wound Care Management, and a Certified Wound Specialist. Dr. Stone is a nationally recognized speaker on the topics of wound care and hyperbaric treatment.
