Astra Tech

I hope all of you are well. We have some exciting changes occurring here at Eastern Oklahoma Periodontics. We are in the process of incorporating a new dental implant system. While the system, Astra Tech, is new to us, it is not a new system. The system has years of research behind it, and I feel like it will be a great addition for us. In my opinion the three hot topics in implantology now are the surface of the implant, micro threads at the neck, and the connection. I believe Astra Tech's implant has been at the forefront of all three of these areas. The Astra Tech implant has a conical connection, which many of the implant companies are now incorporating in their designs. The implant also has micro threads, and their Osseospeed surface has great research behind it. We will still continue to offer Nobel Biocare implants, as well as Zimmer Dental's implants (including their ERA mini implant).

OK MOM

Oklahoma Mission of Mercy is again approaching. I am very excited because OK MOM is being held on February 3 and 4, 2012 at the SE Expo Center in my hometown of McAlester, Oklahoma. You can get more information on the web at www.okmom.org. Please volunteer. We will need all the help we can get to make it a success!

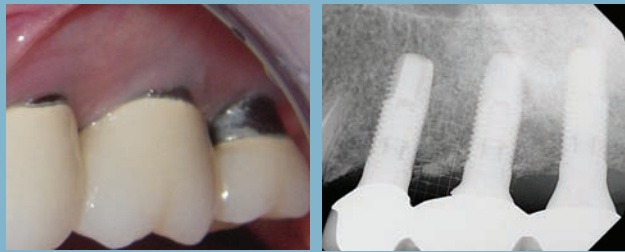

Case Studies

Case Presentation 1: Subepithelial Connective Tissue Grafting. The patient presented with severe gingival recession and mucogingival defects on the buccal of the mandibular arch. The patient had connective tissue grafting on the lower anterior. I was able to achieve excellent root coverage, tissue thickness, and the patient now has a very wide zone of keratinized attached gingiva.

Case Presentation 2: A patient came in for an implant in a different area, but we had treated the patient before for a sinus graft in the upper left quadrant with three implants. The case is several years out, and as you can see we got a very stable and functional result.
