Eastern Oklahoma Periodontics

Spring 2011

Kelly Professional Building • 6565 South Yale Ave., Ste. 1008 • Tulsa, Oklahoma 74136 • 918.492.0737 • www.eoperiodontics.com

Spring Is Here!

As you can see, for Spring Break Neely and I took the girls skiing and we had a great time. We are also doing some exciting things here at Eastern Oklahoma Periodontics this Spring Season. I am currently involved with two cases that will be presented at the ADA meeting in Las Vegas on Monday, October 10th, 2011. Both of the cases are CT guided cases, and dental implants will be placed for denture retention.

Dr. Joe Massad is the presenter, and I will be on hand to answer questions and explain the surgical procedure. If you plan on attending the meeting, please sign up for this class. There will be a live patient demonstration showing the seating of the prosthesis!

Implant Success Rate

Patients and dentists will ask me what my dental implant success rate is. I have tracked my cases since I started here in Tulsa back in June of 2002. The percentage has only varied slightly through the years.

MY DENTAL IMPLANT SUCCESS RATE

97.52%

Case Studies

Cosmetic Crown Lengthening

The patient was a young female who had recently completed orthodontic therapy. The patient had the classic “gummy smile”. The reason that the patient has such limited clinical crown length is that her bone crest was right at the CEJ. The tissue is the issue, but the bone sets the tone. If you just remove the tissue, the biggest portion of the tissue will grow back. In order to get beautiful, long lasting results, you have to address the bone. In this case my initial incisions were made with a diode laser. I then came back with a scalpel, reflected a full thickness buccal flap, and adjusted the bone crest on the buccal to the proper level.
