IMPLANT TREATMENT PLAN

☐ Initial Implant Examination
At this appointment you will have an evaluation with Dr. Calvert to discuss and determine your Implant Treatment Plan. Dr. Calvert will review your medical and dental history. Dr. Calvert will then evaluate, with the use of computerized digital scanning or radiographic imagery (x-rays) or models and photographs, your upper and lower jaws, and occlusion and determine the health of your gums and bone in the implant site/s. Dr. Calvert will discuss other alternative treatment options and any necessary augmentation surgical procedures prior to your implant placement to include the removal of hopeless teeth, adding bone to the jaw or ridge, or tooth socket, or sinus space, for the success of your implant surgery. If augmentation surgery or an extraction and bone graft is indicated, there may be an additional 8 to 12 week healing period before implant placement. You may receive instructions regarding your implant surgical appointment. An office coordinator may discuss your treatment plan fees and insurance coverage. Financial arrangements may be set up and you may schedule your surgical appointment. Following this appointment, Dr. Calvert will mail and/or call your dentist on a regular basis with an update about the progress of your implant treatment.

☐ Implant Surgical Appointment
Your scheduled implant surgical procedure will be performed at this time. It is usually performed with a comfortable sedation medication. Someone should escort and drive you home. Please read carefully all the pre-surgical information that was given to you and take the medications prescribed by Dr. Calvert. Once you have scheduled a surgical appointment, remember this time is reserved for you, THEREFORE, WE REQUIRE A ONE WEEK NOTICE BE GIVEN IF CANCELLATION IS ABSOLUTELY NECESSARY. Patients should understand that the office reserves the right to charge patients $200.00 for surgical appointment cancellations.

☐ Implant Surgical Evaluations - (1 to 2 weeks following your implant surgery)
At these appointments you will be examined to review your healing, remove sutures, and address your questions regarding your implant treatment. Further instructions on post-surgical healing and post-surgical hygiene will be given.

☐ Bone Integration Evaluation and Digital X-Rays - (2 to 4 months following your implant surgery)
This appointment will allow Dr. Calvert to review and clinically examine the bone integration in the dental implant areas using digital x-rays. During this time, you may see your dentist for routine recall cleanings of your teeth or other dental procedures.

☐ Implant Exposure and Healing Abutment Placement - (4 to 6 months following your implant surgery)
At this appointment Dr. Calvert will expose your dental implant/s and place a healing abutment on the implant/s. This appointment is a minor surgical procedure, and in most cases, you will not be given sedation medication and you can drive yourself to and from the appointment (sedation medication is available upon prior request).

☐ Final Abutment Placement in Preparation for your Final Implant Crowns by your Dentist - (2 to 6 weeks following implant exposure)
At this appointment Dr. Calvert will make arrangements for the placement of your final fabricated or custom abutment/s. Dr. Calvert or your dentist will place the final abutment/s on your implant/s. The final abutments will be torqued by Dr. Calvert or your dentist, and they will be ready for your dentist to place the final crown/s. At the conclusion of this appointment, if Dr. Calvert places your abutments, he will advise you when to contact your dentist and make an appointment for your final crown/s.

☐ Implant Maintenance - (Ongoing every 3 to 12 months)
Your final implant crown/s should be brushed, flossed, and cleaned as you would your natural teeth. Regular recall/prophylaxis at your dentist or our office is recommended every 4 months. After your final crown/s is complete, make an appointment for Dr. Calvert to examine the implant/s and crown/s. It may be indicated to fabricate a bite guard or to adjust your bite or occlusion and take digital x-rays to evaluate the bone around your implants. Remember, implants and the crowns are very strong, but subject to damage and infections as are your natural teeth, if you notice any changes, please contact Dr. Calvert immediately.
