

Pigmented Lesions Pre-treatment & Post-treatment Instructions

Precautions Before and After Laser Treatment

Avoid sun exposure for at least four weeks prior, during and at least one week after final treatment. A broad-spectrum (UVA/UVB) sunscreen of SPF 30 or higher should be applied whenever exposed to the sun.

Expectations Following Treatment

Immediately following treatment, the area may show a slight erythema with some swelling. Blistering may occur.

General Skin Care

Treated lesions will likely crust. Do not rub, scratch, or pick. Let it fall off on its own.

Do not shave over the area if swelling, crusting or scabbing is present. If persistent swelling, stinging or burning occurs, apply ice. Wrap the ice in a soft cloth. Discomfort may be relieved with Tylenol.

In case of signs of infection (pus, tenderness, fever), contact the office immediately.

Post-treatment skin care instructions must be followed to prevent any complications.

Please, contact our office at (614) 322-7917 with questions or concerns regarding your treatment.
