Wednesday, August 25, 2010

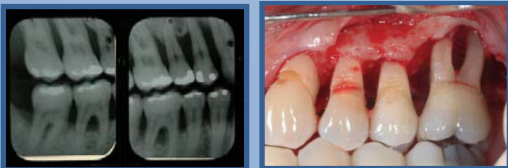

PROGRAM FOR HEALTHY PATIENTS AND A HEALTHY PRACTICE

Course Description:

This high-energy, practical, “how-to” program will explore the benefits of using a “Customized Care Program” for patient care. According to the ADA, a patient assessment should be done on each patient at every appointment. This course will teach participants how to integrate five time-efficient comprehensive clinical screenings to improve restorative/esthetic identification and periodontal therapy enrollment. Periodontal referral to support restorative treatment plans will be outlined.

Strategies for effectively discussing the emerging science of the oral systemic link will also be discussed compelling patients to *want* the dentistry they *need*. Dental professionals are moving beyond a “mouth-only” approach toward whole-body wellness through a customized care approach.

This course is sponsored through an educational grant provided by Philips Sonicare ®
