## THE MOST FREQUENTLY ASKED QUESTIONS

### HOW MUCH DOES IT COST?

As with all dental or medical treatments, knowing the precise cost without a full evaluation of the patient's needs is extremely difficult. The cost will also vary by dentist.

### CAN YOU PROVIDE A PRICE RANGE?

We have found that providing this information is more often misleading than useful. The procedures are covered by Medicare and most Medical Insurance companies. We offer **0% interest free terms** to pay over time. We find it better to have each person's situation reviewed and then discuss cost and coverage. So, we do not estimate or provide a price range without seeing you and understanding your specific needs.

At the consultation, we will discuss your insurance carrier and your particular policy coverage, your night breathing needs and then we can be clear about your costs.

### WHAT CAN I EXPECT AT THE CONSULTATION APPOINTMENT?

All Full Breath Dentist Associates offer a Consultation appointment. At this appointment, the dentist will evaluate your breathing, provide you with data regarding your air flow and breathing issues, review your sleep study (if you have one) and demonstrate how **THE FULL BREATH SOLUTION** performs and illustrates its effectiveness. All your questions will be answered and while you are with the dentist, a member of the staff will evaluate your insurance coverage so before you leave every item can be covered in detail. You will leave with no unanswered questions.

## DOES INSURANCE COVER THIS?

Yes, it is covered by Medicare and by **most** Medical Insurance companies. Your insurance company and your policy will determine the degree of coverage. Coverage varies greatly by company and policies. Medicare will pay nearly all the costs in most parts of the country.

## IS SURGERY INVOLVED?

Absolutely not! This is **THE MOST COMFORTABLE SOLUTION TO SNORING, CPAP INTOLERANCE AND SLEEP APNEA AVAILABLE**. It is a small **mouthpiece** worn on the upper or lower teeth and custom created to meet your specific night breathing needs to maximize air flow to your lungs and to prevent snoring, while dramatically reducing or eliminating Sleep Apnea.

## HOW LONG DOES IT TAKE TO GET A MOUTHPIECE?

If, during your Consultation visit you decide to pursue treatment, we will begin the process that same day. At your next visit (within 2 weeks), you will receive the custom fitted **FULL BREATH SOLUTION**. From this point forward, it now depends upon you and your personal needs.

The number of visits varies by individual.

## WHAT DOES IT LOOK LIKE? HOW DOES IT WORK?

Snoring and Sleep Apnea is created when the tongue rolls back and blocks the airway.

**THE FULL BREATH SOLUTION** inhibits the tongue from rising and rolling back over the airway.

When you wear **THE FULL BREATH SOLUTION**, you usually feel just the mouthpiece on your teeth, like wearing a mouth guard. During sleep, your tongue will want to rise, and it will then encounter the back bar and tail, which will deter your tongue from rising. This is the main theory behind

**THE FULL BREATH SOLUTION**. Based upon your needs, there are further subtle adjustments that can be made to control your tongue movement and prevent snoring.

## WILL IT REPLACE THE CPAP?

The CPAP forces air past your tongue and into your airway and can be adjusted to meet your condition and always force the air into your lungs. Nothing is more effective than the CPAP and we recommend it, if you can live with it.

However, the **MAJORITY** of people prescribed this treatment, cannot accept it.

There is a long list of issues that people find difficult for them with the CPAP. Should this be your case, then **THE FULL BREATH SOLUTION** is the most effective solution after the CPAP. It will open your airway, increase the airflow to your lungs and reduce your apneic events if you have Sleep Apnea

## WHY IS THIS CONSIDERED THE NEXT GENERATION SOLUTION FOR SNORING?

Nothing like it exists. There are over 80 dental mouthpieces offered for snoring and Sleep Apnea. They are called Mandibular Advancement Appliances. The theory behind these appliances is that they advance the mandible (move the lower jaw bone forward). The difference between one appliance to the other is that they use different systems to move the lower jaw forward. Some use screws and tension, and some use elastic bands and tension. All of these appliances cover the upper teeth and lower teeth and have a hinge in the front or back.

**THE FULL BREATH SOLUTION** is not built on the theory of moving the lower jaw forward. It is built on the theory of inhibiting the upward and backward movement of the tongue which is the cause of snoring and blockage of the airway which leads to Sleep Apnea. It just covers the lower teeth, is not bulky or uncomfortable and it is effective, extremely effective, while being easy to wear. The state-of-the-art design, allows it to be the most comfortable for the patient and the most effective for the patient.

### IS IT GUARANTEED?

More than four-thousand people have been treated successfully with **THE FULL BREATH SOLUTION**.

Invented by Dr. Keropian, **THE FULL BREATH SOLUTION** has **5 FDA Certifications**. Dr. Boskovic has been directly trained and certified to treat by Dr. Keropian. The latest technology is used to measure your upper airway and calculate airflow to your

lungs. This is done by using sophisticated airway measuring computers. This provides a clear measurement for the doctor to monitor your progress. This is a science that delivers airflow to your body and cells that is now being diminished due to snoring and poor night breathing. There is no guesswork.

There is little in medicine, dentistry or life that can be guaranteed. But the initial Consultation will determine if **THE FULL BREATH SOLUTION** is most likely right for you. It has been right for nearly every single patient because the technology and science involved allows the doctor to deliver results nearly every single time.

### HOW DO I GET ONE AND STOP SNORING?

Call 714.832.2672 and someone on our staff will schedule a consultation for you.
