Recommended Tools

- Utility knife
- Phillips screwdriver
- Rubber mallet
- Socket and ratchet - 7/16"
- Level
- Hex key set
- Drill and bit - 3/16"
- Plumb bob

Before You Begin

NOTE: A data line has been included with the dental light for use with A-dec 500® products. If the light is not being used with an A-dec 500 products, disregard the data line. The data line should never be plugged into a telephone jack.

Do not remove the track from the ceiling pallet.

WARNING: Two people are required to install the track light to prevent injury.

Requirements for Electrical Wiring and Power

Electrical wiring must be installed by a licensed electrician according to local building codes and must meet the following additional requirements. Installation must comply with prevailing codes. A-dec recommends installation of a wall switch between the power source and the dental light transformer. A wall switch provides safety and convenience during installation and service. For transformer wiring information, refer to page 7. Electrical power/transformer and data lines are available above the head of the chair (see Figure 2 and box template) at a point 13-3/4" (349.2 mm) from the edge of the chair baseplate.

- Allow a stub of at least 6" (152 mm) of wiring for connection to the light transformer.
- Use wiring suitable for at least 90°C (194°F).
- Ensure that all wiring is properly grounded.
- Protect the circuit with a circuit breaker.
How to Prepare the Ceiling

The track light can be installed to a variety of ceiling constructions. Check local and state code authorities about installation requirements for this product.

**CAUTION:** Be sure the ceiling sub-structure supports a minimum of 200 lb (90kg).

1. Consult your operatory floor plan, and the dimensions shown in Figure 2 and Figure 3 to determine the track light location.

2. Mount the ceiling pallet (the wooden panel the dental light track is mounted on) with a minimum of four 1/4” (6.4mm) x 3” (76.2mm) long lag screws and flat washers, provided in the install kit. The screws must mount into a minimum of 2-1/2” (63.5mm) of solid wood.

3. Use the box template for locating and drilling the mounting holes for the light.

Use a 3/16” bit to drill the pilot holes previously located with the installation template.

4. Determine the location of the ceiling joists. Locate the mounting holes using the template. If the installation requires different mounting hole locations, or additional bolts or screws, drill holes as needed. You may need to remove the inside trim panels.

**NOTE:** After reassembling, clean debris from tracks.

5. Modify the ceiling sub-structure to accommodate the light installation. See Figure 4 for cross bracing a variety of sub-structures. The holes in the mounting pallet correspond with the holes marked by using the template.

**IMPORTANT:** If the track opposite the transformer is closer than 9-1/2” (241.3 mm) from a wall, the trolley and post assembly must be installed before the track is installed on the ceiling.

New Construction

Existing Construction

Suspended Ceiling, Wood Structure

Suspended Ceiling, Metal Structure
How to Install the Track
1. Position the track on the ceiling with the transformer over the electrical supply stub above the head of the chair. Route the power cord through the large hole and the data line through the small hole.

2. Remove the end cap by removing the two screws securing it to the track assembly. Remove the outside trim panels and remove the transformer cover.

3. Attach the track mounting pallet to the ceiling by using either the four 1/4” (6.4mm) x 3” (76.2mm) long lag screws and flat washers provided in the install kit, or bolts, washers, and nuts.

NOTE: Be sure the pallet is level so the trolley does not drift. Level the pallet with shims on each end as necessary.

Install the Trolley
Attach the Post
1. Route the light cable through the trolley and attach the bracket to the trolley with two screws.

2. Hold the end of the post with the cross hole toward the trolley base (see Figure 7), then pull the trolley power cord down through the post.

3. Push the post through the hole in the trolley. Orient the post locking tab slot directly underneath the dual wheel side of the trolley. Install the post cross pin through the hole. Orient the drilled hole to the side opposite the power cord restraint bracket, and insert cross pin retainer.

Figure 5. Recommended distances for positioning

Figure 6. Recommended distances for positioning

Figure 7. Recommended distances for positioning

Figure 8. Recommended distances for positioning
4. Secure the post to the trolley by tightening the setscrew (see Figure 9).

**Attach Trolley Assembly**

1. Partially insert the trolley assembly on the track at the end opposite the transformer. The trolley goes on the track only one way.

2. Route the cable through the right side of the trolley.

3. Slide the trolley on the track.

4. Install and tighten the stops in the track. Use a hex key to tighten the stops. Install the rubber bumpers.
How to Install the Flexarm and Light Head Assembly

For left-hand usage, remove the stop screw and flexarm cover, then install stop screw directly above the flexarm.

1. Slide the retaining collar onto the light post with the collar setscrew towards the bottom of the post then use a 1/16" hex key to lightly tighten the setscrew.

**Caution:** Do not over tighten the setscrew. Doing so will mar the post.

2. Lubricate the flexarm hub. Do not lubricate the locking tab groove.

3. While holding the flexarm and light head assembly, join the electrical connectors, then slip the mounting hub into the post. If the hub does not slip easily into the post, check that the stop screw is tight.

4. Install the locking tab securely into the slot. Loosen the retaining collar setscrew. Lower the collar over the locking tab and firmly tighten the setscrew. Be sure the setscrew is not over the locking tab.

5. Rotate the flexarm to ensure that it rotates the desired span and stops. If not, remove the stop screw and reinstall it on the opposite side.

6. Move the light along the track to make sure it rolls smoothly. Wipe the track and wheels if necessary to remove any debris which might have fallen from the ceiling during installation.
How to Connect the Transformer
Using twist-on wire nuts, connect the track light transformer to the electrical stub for a single light. If using with A-dec 500 products, connect the data line to the three-way data connector.

Warning: Electrical power to the wiring stub must be OFF to prevent injury from electrical shock.

How to Install the Transformer Cover, Trim Panels, and End Cap
Install the transformer cover and outside trim panels. Be sure each trim panel is aligned with the end of the track. Install the end caps.

How to Test the Light
Turn on power to the light transformer, then move the On/Off switch to the ON position (see below). If the light does not work, verify there is power to the transformer and check all connections.

Check the three light intensity settings with the intensity switch (see Figure 17).

Before Leaving the Facility
Distribute the Owner’s Guide and instruct the dental team in light operation and maintenance.
## Identification of Symbols

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="UL Symbol" /></td>
<td>Recognized by Underwriters Laboratories Inc. with respect to electric shock, fire and mechanical hazards only in accordance with UL 60601-1 (2601-1) and under mutual recognition agreement with CAN/CSA C22.2, No. 601.1.</td>
</tr>
<tr>
<td><img src="image" alt="UL Symbol" /></td>
<td>Classified by Underwriters Laboratories Inc. with respect to electric shock, fire and mechanical hazards only in accordance with UL 60601-1 (2601-1) and under mutual recognition agreement with CAN/CSA C22.2, No. 601.1.</td>
</tr>
<tr>
<td><img src="image" alt="UL Symbol" /></td>
<td>UL listed to UL 61010A-1, BS EN 61010-2-010 and Canadian (CAN/CSA C22.2, No. 1010.1-92) safety standards.</td>
