

GENTLE, MINIMALLY INVASIVE DENTISTRY FOR YOUR CHILDREN

Summer's here and it's time to take the kids to the dentist again. But you don't want to put up with all of the crying, screaming, and shots in the mouth, right?

Well, You Don't!!!!

Many years ago we recognized that most dentistry is repair of old dentistry, and that most patients who are fearful of the dentist were treated with old techniques requiring shots, drills, and fillings. Twenty five years ago, we perfected techniques that eliminate the need for most shots, the high speed drill, and the need to subject the patient to a lifetime cycle of repair and replacement of those fillings.

HOW GENTLE ARE OUR TECHNIQUES?

Many children's dental practices require that children four years old and younger be put to sleep so they can apply their brutal and antiquated techniques. The vast majority of the children treated in our practice will never need shots or have to go through the trauma of being put to sleep.

If you are looking for gentle, sound, atraumatic dentistry for your children, we have spent a professional lifetime developing and teaching these techniques to dentists all over the world. You will be invited back to the treatment room to sit with your child through our procedures, unlike many other offices that still employ antiquated dental techniques that require shots and high speed drills.

WE ACCEPT MOST INSURANCES, INCLUDING MEDICAID

If modern, state-of-the-art, gentle dentistry is important to you for your children and you, give us a call.
