Spring Is Here!

We are off to an exciting start this year at Eastern Oklahoma Periodontics. I just got back from OK MOM in Lawton, and it was really a great experience. OK MOM 2014 will be in Enid. I encourage all of you to try and attend. It is really a great event.

We are reaching out to our referrals to try and streamline our correspondence with you. Please contact our office and let them know if you would like us to email you our patient update letters versus sending them through traditional mail. You can also email us at eoperiodontics@gmail.com.

I have talked about it in previous letters, but a little more than a year ago, I switched to the Dentsply Implants Astra Tech system. One of my main reasons for switching was that the data that I was seeing was showing superior bone stability with conical implant connections over time. We invite all of our patients back one year after placement for a free check. These radiographs show the bone levels at time of placement, and over one year later. As you can see, we are seeing fantastic results!
Case Studies

**Case #1:** The patient presented with severe recession and a mucogingival defect on the buccal of tooth #24. A subepithelial connective tissue graft was performed. As you can see, excellent root coverage was achieved, and the patient now has a wide zone of keratinized attached gingiva.

**Case #2:** The patient presented with significant gingival recession in the maxillary arch. I performed a sub epithelial connective tissue graft from tooth #5 to tooth #12. As you can see the patient has excellent root coverage post op, and a very nice cosmetic result!

---

**Services Offered By Eastern Oklahoma Periodontics**

- Implant placement
- Hard and soft tissue grafting
  which includes implant site preparation
- Cosmetic periodontics
- Treatment of periodontal disease

**Dr. William B. Wynn, IV**
