Dear Patient:

Your doctor has recommended that you have a periodontal (pyorrhea) evaluation. The purpose of a periodontal evaluation is to determine the health of your teeth, gum tissue, and supporting jaw bone.

With proper periodontal care (gum treatment) and daily brushing and flossing, you may be able to keep your natural teeth for most of your lifetime.

Lack of proper care may cause unnecessary loss of your natural teeth prematurely.

Today advanced periodontal disease is known to contribute to heart disease, increase the risk of stroke, premature and low birth weight babies, and pose a serious threat to people whose health is compromised by diabetes, respiratory disease, or osteoporosis.

Periodontal care is meant to bring the foundation around your teeth to a state of health that will enable you to:

1. SAVE YOUR NATURAL TEETH
2. PREVENT FURTHER BREAKDOWN
3. LEARN PROPER BRUSHING AND FLOSSING TECHNIQUES FOR IDEAL ORAL HEALTH

Your doctor's concern for ideal health will benefit you in the years to come.

Thank You,

DEE C. NISHIMINE, D.D.S.
