

“Hey Doc, why do my kids need braces now? Aren’t they too young to start braces? (Part 2)”

My March, 2018 article listed several conditions in which early Orthodontic intervention can be beneficial to the children. The following is the list of more situations in which starting Orthodontic treatment early can make the overall treatment more successful and easier:

- **Finger sucking or other oral habits that continue after age 6**
- **Jaw joints that click or are painful**
- **Speech difficulty**
- **Weak chin or prominent chin**
- **Facial imbalance**
- **Jaws that protrude or recede**
- **Embarrassing teeth or smile hidden by hands**
- **Chronic mouth breathing**
- **Lower jaw that shifts to one side upon biting**
